EDUCATION

University of Central Florida

BS in Computer Science, Minor in Statistics

Orlando, FL

Graduated Fall 2024

EXPERIENCE

MES Application Specialist

Jan 2025 - Present

StarPlus Energy

Kokomo, IN

- Debug software issues by analyzing application behavior and logs across C# and Java systems
- Investigate data integrity issues, perform bulk data corrections, and maintain master data using SQL
- Support regular application deployments by validating changes before release
- Maintain wiki documentation covering issue symptoms, root causes, and troubleshooting steps

MES Software Engineer Intern

Sep 2024 - Dec 2024

Twenty-Six Defense Maritime

De Leon Springs, FL

- Developed .NET applications and backend components to support the transition to a new MES platform
- Redesigned an internal idea submission tool's database schema and application logic to support new requirements
- Refactored SQL Server stored procedures to improve query execution performance
- Improved application troubleshooting by adding structured logging and diagnostic data to internal tools

PROJECTS

Hotel Reservation & Access Management API | C#, ASP.NET Core, JWT, SQL Server, EF Core

- Built an ASP.NET Core hotel reservation API with EF Core, JWT authentication, and role-based authorization
- Created integration tests with xUnit to validate endpoints using a seeded test database
- Implemented a custom in-memory caching system with invalidation logic to reduce redundant database queries
- Configured rate limiting with queue limits and request rejection policies to manage request traffic

Neural Chickens | C#, ASP.NET Core, Next.js, Tailwind CSS, SQL Server, Unity

- Developing a full-stack machine learning simulation web app using ASP.NET Core, Next.js, and Unity ML-Agents
- Designed an asynchronous simulation pipeline to queue training jobs and run Unity simulations
- Implemented reinforcement learning agents with configurable observations, continuous actions, and rewards in physics-based simulation environments

Gameplay Imitation Learning System | Python

- Engineered a system that converts raw gameplay demos into visual-action datasets for training temporal policies
- Designed a sharded loading pipeline enabling lossless dataset compression, cutting storage needs by 76%
- Parallelized capture and validation with worker pools to scale processing across available CPU resources

NSIN Problem Intake Platform | React, JavaScript, Node.js, Express, AWS, PostgreSQL

- Designed backend services integrating AWS infrastructure, authentication flows, and application logic
- Used RDS Proxy to pool and reuse PostgreSQL connections to reduce database connection overhead

Bloxdle | Lua

- Developed a daily puzzle game in Lua that reached 400+ concurrent players at peak
- Designed request-throttling and batching logic to reduce API traffic generated by global player statistics updates

TECHNICAL SKILLS

Languages: C#, Java, SQL, TypeScript, Python, C, JavaScript, Lua

Frameworks: Next.js, ASP.NET Core, Entity Framework Core, Tailwind CSS

Developer Tools: Git, VS Code, Visual Studio, Cursor, OpenAI Codex

Libraries: React, Serilog, ML-Agents
